You can do this both actively and reactively, ie, before and after something goes wrong.

Actively - you or other appointed person can carry out inspections, have reports submitted to you by managers, do spot check visits, safety representative inspections, etc.

Trade union safety reps have the right to carry out inspections and investigate accidents.

Reactively - you can investigate any accidents or sickness absences that occur.

Investigating accidents is a useful way of reviewing your safety systems – ask yourself why the accident really happened and what you can do to stop it happening again.

Similarly, if you have a number of employees absent because of similar ailments, this might mean there is a problem with their jobs causing ill health.

When you find out what went wrong – put it right.
